

1. Project title

Yoga to You

2. Team members

Colin Craighead, Justin Chen, Tanner Slemmer, Nirvan Ashish

3. One paragraph "elevator pitch." What is the big idea of your project? Why is it important? (Obviously your ideas about the project will develop over time, but you should be thinking about this already.)

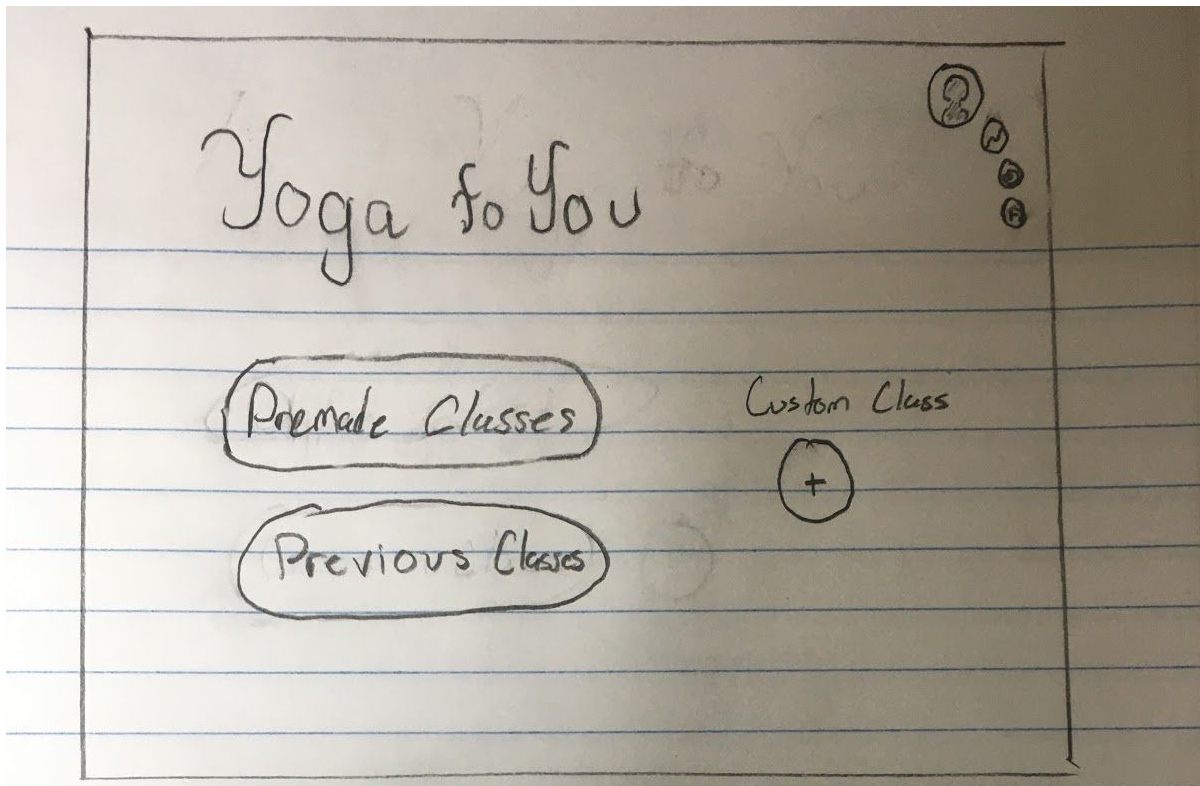

An application that works hand in hand with augmented reality, to let you practice yoga. You won't have to travel around to find an instructor and class you feel comfortable with because you can choose from a multitude of classes and instructors in the application, from the convenience of anywhere, including your own home! You can also adjust the difficulty and length to a session that feels just right for you. There will be various options to choose from with a user friendly interface.

4. Two paragraph research plan. Who will you talk to in order to understand the problem? What criteria will you use to evaluate your work?

Our project's audience mainly targets those with lifestyles that do not allow for them to afford or attend classes regularly; therefore, we believe it is vital that we target a variety of people. There are people who do yoga at home without technology, people who want to get into yoga, people who are uncomfortable in a class setting, and those that may just want to try a new avenue for yoga. These would be the ideal people to talk to.

There are several pieces of criteria we can use to evaluate our work. These include how often people use our technology, how much value they gain from it or how easy it is for the user to access their preferred favorite class..

Initial sketches. Sketch out some ideas for your project on paper.

5. **Collaboration plan.** You should discuss with your group members how you will manage the group project. Write up an initial collaboration plan here. You should address the following topics (and whatever else you think is relevant):

1. When and where will you meet to work on the project? What will you do if a meeting needs to be rescheduled? Who will handle scheduling?

We will meet before or after the lecture or recitation, or on the weekends, depending on each person's schedule for the week. In these meetings, we will be meeting on campus centers, in study rooms or just open areas. In the case that we are not able to meet in person. We can have voice calls over discord to discuss furthering the project. We can reschedule by talking mutually in our group chat if members can't make a meeting. If a meeting is missed, work can still be put in outside of the meeting on a person's own free time instead.

2. What tools will you use to communicate about the project and share your work? Who will set them up and manage them?

We will use Google Drive for documents and discussion, Discord for voice calls, and text messages for further quick communication.

3. How will you handle accountability for the project? How will you ensure that everyone contributes to the project? How will you address a situation when

someone is unable/unwilling to complete their assigned work so that you can still turn in your work by the deadline?

Accountability will be handled based off of an individual person's account. It is important that all the requirements of the project are met. We will split up the necessary work evenly four ways and each person will be assigned their tasks. Ideally everyone would complete their portions of the tasks assigned to them, but if need be, by starting early before the deadline, if a single member is unable to contribute, the rest of the people can pick up the slack and still submit the work by the deadline. Its then the rest of the teams job to ask the person to do their part the next time.
